

A new standard of living: Introducing the
STANDING-HEIGHT POOL ENCLOSURE

abrisud[®]

Europe's Swimming Pool Enclosure Leader

+ Room

The standing-height unit is an ideal cross between the beauty of a conservatory (sunroom) and the comfort of a swimming pool enclosure. This allows it to become an area of its own, perfect for leisure activity! The interior volume lets you enjoy pool pleasure to the fullest: forget about that nudging cool breeze when you get out of the water, and move freely about your pool. These are just some of the benefits you will discover – and which you will not want to do without, either!

You thus create your own mini-climatic habitat around your pool and also enhance your home.

The enclosure can therefore be considered “residential” from a comfort point of view and, as such, is a natural extension of your living quarters. Yet, technically-speaking, it is a separate structure which can be free-standing, backed up against the house itself or even wall-mounted.

Ease

An ABRISUD enclosure protects your pool from such forms of natural pollution as: leaves, pollen, dust, insects, small animals and the like. The water remains cleaner, and pool maintenance chores are considerably reduced.

Security

In France there is a law which stipulates safety measures to be taken around the pool area. The standing-height enclosure fully meets those requirements. For example, once your ABRISUD is closed, your pool is inaccessible. You need not worry any longer about child safety – especially when toddlers scurry about!

Comfort

There is a special quality to being able to swim at any given moment of the day – and up to eight months of the year! The water temperature is increased on the average by 6° to 8°C, which is particularly enjoyable during the off-season. Thanks to ABRISUD, you simply get more out of your pool!

5

Patents which make the difference!

The technical guarantees linked to our production process ensure reliability.

The guarantee of being able to move your enclosure alone* and effortlessly!

The unique telescopic guiding system enables **a single person to maneuver*** the enclosure. In addition to the rollers underneath the unit itself, there are also wheels mounted within the structure to maintain course without path deviations, thus **avoiding any jamming**.

The wall-mounted unit is equipped with an exclusive mechanism located within the guide rail and allows for the sections to be moved with ultimate ease of handling. **There is no risk of jamming, and the touch of a finger fully suffices!**

The guarantee of an enclosure which will withstand the test of time.

Angle profiles with integrated drainage! They have been specially designed to shed off rainwater, thus avoiding it to run into the structure's profiles. Air also circulates better between the polycarbonate layers, **thus avoiding any water stagnation**.

No more undue dampness:

Neither mildew, nor formation of algae will spoil the appearance of your enclosure!

Due to pressure exerted upon the ground fastenings when these are located in lateral alignment with the enclosure, the risk exists of damaging the structure.

Our patent-pended, reinforced ground anchoring devices made of aluminium are, however, located perpendicular to the enclosure and therefore guard against any rotating deviation to one side or the other of said fastenings.

Heightened security: Our fastenings can be totally removed when the enclosure is opened so as to avoid any possibility of injury.

The roof is perfectly maintained!

An exclusive summit profile ensures that the junction of the 2 roof panels is optimal, without danger of swelling or dislodging.

No more disturbing rattling of glazing panels when the wind comes up – **nor**, worse yet, when stormy conditions prevail, **having them blown away!**

Avoid single-piece glazing panels in the roof area, as they always end up by swelling. Our double roof slope ensures that the panels hug the structure, thus maintaining an arch-like shape.

2 separate panels make for a perfect fit!

**Our enclosures comply with the French NF P90-309 standard.
10-year guarantee**

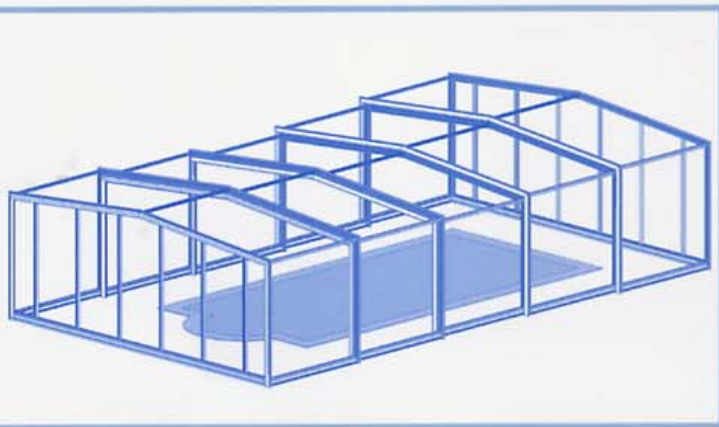

*Central opening possible up to 7 sections with a width of 6,20m.

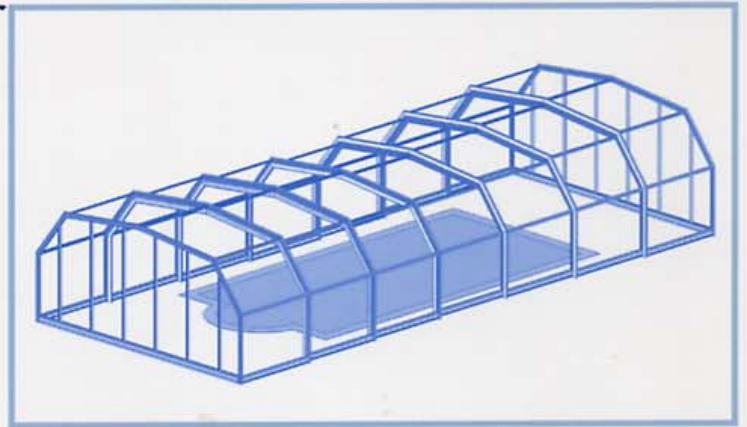

With Abrisud, properly choose your standing-height enclosure.

ABRISUD has a complete line of telescopic standing-height enclosures to meet your needs and wishes based upon the specifics of your site (location of pool and house, as well as aesthetic considerations). Choose from among:

Enclosure Emona with upright side panels

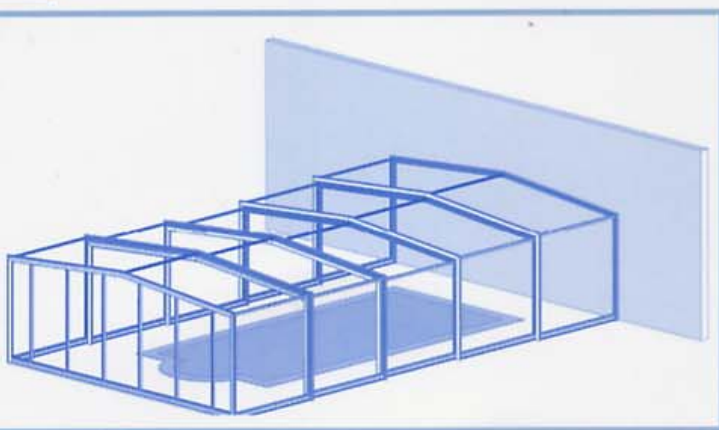

Enclosure Aduly's with a facet-like touch

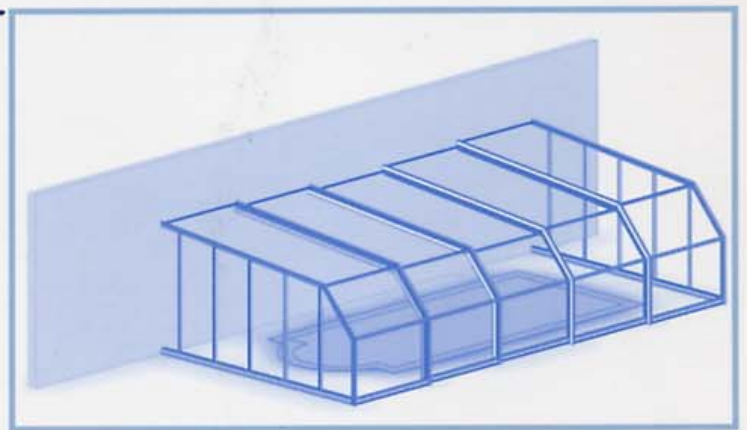

or

End-Mounted Enclosure

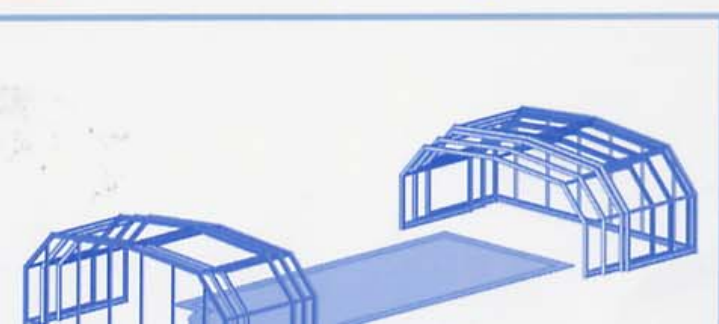

Wall-Mounted Enclosure

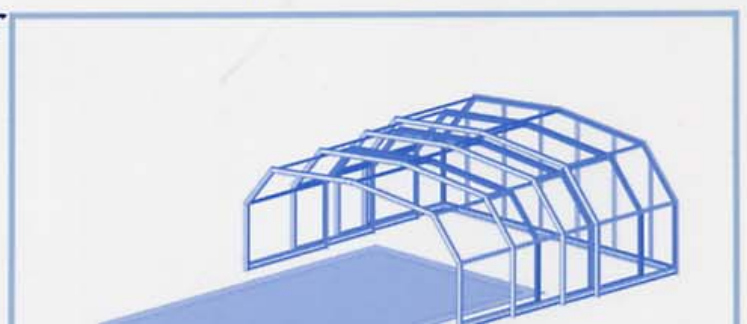

or

Central Opening

Opening to One Side

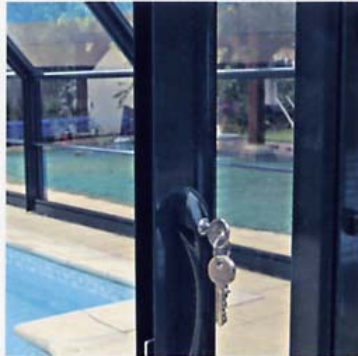

or

The Options

OPENINGS

Sliding door:

- either simple or double, when end-panel located
- can be laterally mounted.

- Safety window

A partial opening away from the reach of small children allows for safe ventilation.

HEATING

- Climabri®, heating fuel.
- Climabri® naturel gas.

Unit's housing matches the enclosure's color.

MOTORIZED

- The motor unit is compact and powered by an electronic cell.
- Control panel.

MATERIALS

Panels

- PMMA (Plexiglass® or Altuglass®), anti-UV coating (both sides), transparent or granite effect, 4 mm.

6 mm security glazing

Roof

Double-ply polycarbonate, anti-UV coating (both layers), 8 mm

Aluminium Structure

Thermo-lacquered finish, Qualicoat® and Quali Marine labels

- White (Ral 9010)
- Green (Ral 6009)

Stainless Steel Fittings

Nylon rollers

Cast aluminium inner reinforcement, **angle joints**, thermo-tempered (doubles mechanical resistance levels).

READY-TO-GO INSTALLATION

It is our goal to simplify things for you. This commitment also includes the administrative aspect of your enclosure's on-site installation, (building permits and related authorizations).

ABRISUD delivers and installs throughout France and Europe. Our specially-trained, technically-qualified installation personnel know our enclosures inside and out!
